EXECUTIVE SUMMARY

Overview	Swan Environmental Limited (Swan) were retained by Gentoo Homes to undertake remediation works and validation testing on site. This report provides the relevant information in accordance with NHBC Standards Chapter 4.1, for the discharge of remediation conditions of Plots 1, 9, 12 and 15 at Whitburn Road, East Boldon, NE36 0AG. Elevated Arsenic, Lead, PAH and Trichloroethene levels in these areas were found to exceed GAC levels for human health in Roberts Environmental Limited (REL) Phase I & Phase II Geo-Environmental Site Investigation and Risk Assessment, dated 2016 (Reference: 161107.R.001). A Site Layout and Reduced Levels Drawing is presented in Appendix A.
Site Address	Whitburn Road, East Boldon, NE36 0AG.
Site Setting	The site comprises a rectangular shaped plot of land. To the east and northeast there are agricultural fields with residential properties beyond. An industrial estate is located to the west of the site with a car wash and a garage with residential properties beyond. Land use to the northwest comprises an industrial estate with a diving school and salvage yard.
Field Observations	No visual or olfactory evidence of contamination was observed during the sampling activities for any remaining soils. See photographs in Appendix D.
Human Health Results	No topsoil or subsoil material was shown to be above the GAC for the chemical suite analysed in accordance with YALPAG guidance for a brownfield source.
Recommendation	Following the removal of contaminated soils across the site and the placement of the clean cover soils to 0.60m, the site is now within GAC acceptable levels and suitable for residential land use with homegrown produce.

1. INTRODUCTION

1.1 Context and Objectives

Swan Environmental Services Ltd (Swan) were retained by Gentoo Homes to validate remediation works on site at the Sandpiper View Development off Whitburn Road, East Boldon.

Previous investigation carried out by Roberts Environmental Limited (REL) showed elevated levels of Arsenic, Lead, PAHs and Trichloroethylene above suitable levels as discussed in REL's, 2016 Phase I & Phase II Geo-Environmental Site Investigation and Risk Assessment (Reference: 161107.R.001).

This report aims to summarise the environmental remedial activities carried out during the works, presenting sound documentation, proof of clean soils and depth validation in contaminant hotspot areas. The report discusses in-situ soil laboratory results, clean cover testing validation and presents photographic evidence of depth verification upon plot completion.

1.2 Background Information

Swan were retained by Gentoo Homes in October 2019 to carry out Remedial works in line with the Proposed Remediation Strategy by REL, dated 13 November 2018 (Ref 180813.RS.01).

During the investigations carried out by REL on site in November 2016, results showed levels of Arsenic, Lead, PAHs and TCE which were recorded above the GAC for Human Health in considered hotspot areas on site, reference REL, 2016 Phase I & Phase II Geo-Environmental Site Investigation and Risk Assessment (Reference: 161107.R.001) which should be referred to in conjunction with this document. All works regarding the remediation of the site that Swan Environmental were involved with are discussed in more detail in Section 2 of this report.

1.3 Previous Investigations

Previous desk study and intrusive investigations were caried out by REL relating to the works at Sandpiper View, East Boldon. These documents were reviewed before works were carried out by Swan Environmental Services, and are referenced as follows;

- REL, 2016 Phase I & Phase II Geo-Environmental Site Investigation and Risk Assessment (Reference: 161107.R.001)
- REL, 2018 Contaminant Delineation Investigation at Dunelm House, East Boldon (Reference: 180813.02)
- REL, Gas Addendum Report (Reference: 161107.02).

The works were undertaken in accordance with the following documents.

- Proposed Remediation Strategy by REL, 13 November 2018 (Ref 180813.RS.01); and
- Verification Requirements for Cover Systems, Technical Guidance for Developers, Landowners and Consultants, YALPAG, Version 3.3 October 2016.

1.4 Scope of Works

Swan was retained by Gentoo Homes between October 2019 until December 2020 to carry out Geo Environmental duties required at the East Boldon development.

The works involved in the development comprised the following elements:

- Hughes Bros Limited excavated soils across the site to bring levels down to 0.6 and 0.7m bgl.
- Material was reduced to levels and hauled offsite during the excavation works.
- Post material removal, no.4 validation samples were taken in each of the known contamination hotspot areas WS1, WS4, WS5a, WS6 and WS9, to confirm that soils between 0.60m to 0.90m were free from contamination.
- Validation samples were analysed against the levels set for human health in the Land Quality Management S4ULs for Human Health Risk Assessment (Swan's publication number; S4UL3684), published in 2015.
- Analysis of Topsoil and Subsoil samples were carried out at a UKAS Accredited laboratory for the following suite in line with YALPAG, Version 3.3 October 2016;
    - Standard metals (As, Cd, Cr, Cr(VI), Cu, Hg, Ni, Pb, Se and Zn)
    - PAHs (16 USEPA speciation)
    - TPH (CWG banded)
    - Asbestos
- Topsoil and subsoil chemical validation testing carried out (at a rate of 1 per 100m^3 for a Brownfield Source as stated in YALPAG).
- Site won subsoil and topsoil material was placed to a depth of 0.60m in back and front garden plots on site.
- Photographs were taken to show 0.6m 'clean cover' was achieved in targeted areas.
- Report submission of findings.

The scope of works was developed in accordance with the former Environment Agency document, 'Model Procedures for the management of Land Contamination.' Contaminated Land Report CLR11 (works were carried out before the introduction of new LCRM Guidance October 2020).

2. REMEDIATION WORKS

2.1 Remediation Objective

The objectives of the strategy are to:

1. Reduce and remove soils to 0.60m and 0.70m and associated risks identified from elevated levels of;
    - Lead, Dibenzo (ah) anthracene and TCE in the front garden of Plot 1 (WS1)
    - TCE in the back garden of Plot 15 (WS4)
    - Lead in the front garden of Plot 15 (WS6)

2. To ensure that soils left in situ after the reduction of levels was clean and that any contaminated material had been removed. It is noted that after 0.60m of soil was removed in the area of WS9, in-situ validation samples of soil were removed further to 0.90m to test for levels of TCE in the back garden of Plot 9 (WS9).

3. Replace soils with clean imported material from Pennywell (Topsoil) and Coach Lane (Subsoil).

4. Provide photographic evidence to show clean cover layer of 0.60m has been achieved in plots where REL reported contamination.

5. Confirm the site is clean for occupation.

Remediation Objective

Hughes Bros Limited were retained by Gentoo to carry out the groundworks during the construction phase on site to allow for successful remediation. These tasks included the following;

- The excavation of 0.60m depth of material from plots 1 to 11, g1 to g11 and front garden plots 13 to 15, including removal from site to an appropriate waste facility.
- The excavation of 0.70m depth of material from plots 12 to 15, including removal from site to an appropriate waste facility.
- To ensure that plots across the site received clean site won subsoil and topsoil to a depth of 0.60m.

2.2 Summary of Field Work

WS1 (Plot 1) Remediation

REL reported levels of Lead, Dibenzo(ah)anthracene and Trichloroethene to be above screening criteria for human health in sample WS1 at 0.50m (front garden of Plot 1).

Levels of impacted soils were then reduced by 0.60mbgl by Hughes Bros and removed off site.

Verification testing was carried out by Swan to determine levels of Lead, Dibenzo(ah)anthracene and Trichloroethene in the soil retained in location WS1, as part of the Remediation Strategy set out by REL in November 2018. In the area of WS1, no.4 samples were taken to determine the soils suitability for use and to determine whether contaminated soils had been removed. The samples tested were taken between ground level and 0.20m bgl.

Levels of Trichloroethene and Dibenzo (ah) anthracene were found to be below S4ULs screening criteria for residential use with homegrown produce.

Levels of Lead were found to be below the C4SLs for residential use with homegrown produce.

Laboratory analysis suggests that there is no risk to human health from the soils retained on site in the front garden of Plot 1. For results see Appendix C and Table 1 below.

WS1 (Plot 1) Depth Validation

Depth verification was carried out to ensure that the correct depth of soils had been placed. Photos verify a 0.60m layer of clean soils in the back and front garden areas of Plot 1.

Depth validation works were carried out on 20th July 2020 by a suitably qualified Swan Engineer. Photographs and observations showed no deleterious material within the sub soil and topsoil and that the depth of 0.60m had been achieved.

Sample jars did not arrive at the lab until the 5th August due to courier delays. See Photographs in Appendix D.

WS4 and WS6 (Plot 15) Remediation

REL found levels of Lead and Trichloroethene to be above screening criteria for human health in samples WS6 at 0.60m (front garden of plot 15) and WS4 at 0.70m (back garden of plot 15).

Levels of impacted soils were then reduced by 0.60mbgl in the front garden of Plot 15 and by 0.70mbgl in the back garden of Plot 15 by Hughes Bros and removed off site.

Verification testing was carried out by Swan to determine levels of Lead and Trichloroethene in the soil retained in locations WS6 and WS4, as part of the Remediation Strategy set out by REL in November 2018. In each area no.4 samples were taken to determine the soils suitability for use and to determine whether contaminated soils had been removed. The samples tested were taken from soils between ground level and 0.20m.

Levels of Trichloroethene were found to be below S4ULs screening criteria for residential use with homegrown produce in back garden of Plot 15.

Levels of Lead were found to be below the C4SLs for residential use with homegrown produce in the front garden of Plot 15.

Laboratory analysis suggests that there is no risk to human health from the soils retained on site in the front and back gardens of Plot 15. For results see Appendix C and Table 1 below.

WS4 and WS6 (Plot 15) Depth Validation

Depth verification was carried out to ensure that the correct depth of soils had been placed. Photos verify a 0.60m layer of clean soils in the back and front garden areas of Plot 15.

Depth validation works were carried out by a suitably qualified Swan Engineer. Photographs and observations showed no deleterious material within the sub soil and topsoil and that the depth of 0.60m had been achieved. See Photographs in Appendix D.

WS5a (Plot 12) Remediation

REL found levels of Arsenic, Lead, Benzo (a) Pyrene, Benzo (b)fluoranthene and Dibenzo (ah) anthracene to be above screening criteria for human health in sample WS5a between 1.3 to 1.40m in Plot 12. Levels of impacted soils were then reduced by 0.70mbgl across the extent of Plot 12 by Hughes Bros and the material removed off site. Although the contamination remained in situ on site between 1.3m and 1.4m, a cover layer of cohesive clay with a thickness of 1.2m was present above. Therefore, a demarcation layer was deemed unnecessary.

Verification testing was carried out by Swan to determine levels of Arsenic, Lead, Benzo (a) Pyrene, Benzo (b)fluoranthene and Dibenzo (ah) anthracene in the soil retained in location WS5a, as part of the Remediation Strategy set out by REL in November 2018. In the area no.4 samples were taken to determine the soils suitability for use and to determine whether contaminated soils were present at the 0.70m depth. The samples tested were taken from soils between ground level and 0.20m.

Levels of Arsenic, Benzo (a) Pyrene, Benzo (b)fluoranthene and Dibenzo (ah) anthracene were found to be below laboratory detection levels and below S4ULs screening criteria for residential use with homegrown produce in Plot 12 based on a 2.5% OMC.

Levels of Lead were found to be below the C4SLs for residential use with homegrown produce.

Laboratory analysis suggests that there is no risk to human health from the soils retained on site in Plot 12. For results see Appendix C and Table 1 below.

WS5a (plot 12) Depth Validation

Depth verification was carried out to ensure that the correct depth of soils had been placed. Photos verify a 0.60m layer of clean soils in the back and front garden areas of Plot 12.

Depth validation works were carried out by a suitably qualified Swan Engineer. Photographs and observations showed no deleterious material within the sub soil and topsoil and that the depth of 0.60m had been achieved. See Photographs in Appendix D

WS9 (Plot 9) Remediation

REL found levels of Trichloroethene to be above screening criteria for human health in samples WS9 at 0.90m (back garden of Plot 9). Levels of impacted soils were then reduced by 0.60mbgl by Hughes Bros and removed off site.

Verification testing was carried out by Swan to determine levels of Trichloroethene in the soil retained in location WS9, as part of the Remediation Strategy set out by REL in November 2018. In the area of WS9, no.4 samples were taken to determine the soils suitability for use and to determine whether contaminated soils had been removed. The samples tested were taken from soils between ground level and 0.30m.

Levels of Trichloroethene were found to be below S4ULs screening criteria for residential use with homegrown produce in back garden of Plot 9.

Laboratory analysis suggests that there is no risk to human health from the soils retained on site in Plot 9. For results see Appendix C and Table 1 below.

WS9 (Plot 9) Depth Validation

Depth verification was carried out to ensure that the correct depth of soils had been placed. Photos verify a 0.60m layer of clean soils in the back and front garden areas of Plot 9.

Depth validation works were carried out by a suitably qualified Swan Engineer.
Photographs and observations showed no deleterious material within the sub soil and topsoil and that the depth of 0.60m had been achieved. See Photographs in Appendix D.

2.3 Remediation Operations Summary

Hughes Bros Limited carried out the ground workings on site, excavating plots to 0.60m and 0.70m bgl. The soil was removed from site to an appropriate waste facility. The receiving site accepted the material. See Waste Transfer Note in Appendix F, for reconciliation of materials on and off the site.

Excavated soils were replaced in plots by topsoil and subsoil sourced offsite. The soils were chemically tested before being hauled to site and moved to the individual plots using a small dump truck. The soils were placed using an excavator to 0.6m in front and back garden plots across the site.

The topsoil and subsoil were tested for Metals and Metalloids, PAHs, TPHs, OMC and Asbestos in accordance with YALPAG guidance assuming that the material was a Brownfield source. See Appendix B for laboratory results and the soil screen.

Soil samples were sent to a UKAS Accredited laboratory; Chemtech Environmental Limited of County Durham, for analysis.

A minimum of no.6 samples were taken from the topsoil source, as required for a brownfield source as it was estimated that approximately 200m^3 would be required to complete the remediation works.

A minimum of no.6 samples were taken from the subsoil source as it was estimated that approximately 600m^3 would be required to complete the remediation works.

3. ANALYTICAL RESULTS

3.1 Soil Verification Sampling Results

A Generic Qualitative Risk Assessment (GQRA) has been completed to assess whether the potential pollutant / contaminant linkages from soils left in situ after 0.6m and 0.70m removal of material across the site are considered plausible.

A direct screen of the chemical concentrations has been completed against generic assessment criteria (GAC), derived from conservative assumptions. Specifically, the soil laboratory testing results have been compared against the C4SL (2014) for lead and LQM/CIEH S4UL (2015) based on a residential with homegrown produce land use for Arsenic, PAHs and TCE. (Swan's publication number; S4UL3684).

SOM% was recorded between 0.9% and 5.3% in the soils left in situ after removal of 0.6m and 0.7m. A 2.5% SOM has been assumed to assess the risk from the material left in situ.

Table 1: Summary of Toxicity Assessment for a Residential End Use With Plant Uptake

Determinand	Units	GAC	GAC Source	n	[mc]	Location Strata	Primary Pathways	Assessment
Inorganics								
Arsenic	mg/kg	37	(i)	1	5.1	N/A	1	No Further Action Required
Lead	mg/kg	200	(iv)	3	33		1, 2	
Organics – PAHs								
Benzo(b) Fluoranthene	mg/kg	3.3	(ii)	1	0.98	N/A	1	No Further Action Required
Benzo(a)Pyrene	mg/kg	2.7	(ii)	1	0.83		1	
Dibenzo(a,h) Anthracene	mg/kg	0.28	(ii)	2	<0.02		1	
Organics – VOCs								
Trichloroethene (TCE)	mg/kg	1.2	(i)	3	<0.01	N/A		No Further Action Required

Key
[mc] Maximum Concentration Recorded
D. Detected
N.D. None Detected (Limit of Detection = <0.0001%)
Primary Pathways
1 Ingestion of soil and indoor dust and / or oral background exposure;
2 Consumption of home-grown produce and attached soil;
3 Inhalation of dust (background and indoor);
4 Inhalation of vapour (background and indoor);
Generic Assessment Criteria (GAC) Source
(i) LQM/CIEH Suitable For Use Level (S4UL) (2015);
(ii) S4UL – Conservative Assessment Approach of 2.5% SOM;
(iv) Defra Category 4 Screening Level (2014);
(v) CLEA 1.06 Derived Value.

All laboratory analyses were undertaken by UKAS accredited laboratory, Chemtech of County Durham.

3.2 Comparison to Human Health levels

Topsoil Validation

Laboratory testing for SOM was carried out on 6no. samples of topsoil sourced from a site named Pennywell in Sunderland, Tyne and Wear. The testing was carried out in line with YALPAG's guidance of soils from a brownfield source.

SOM% was recorded between 5.1% and 6.1%. A 2.5% SOM has been assumed to assess the risk from the topsoil.

No determinants were found to be in excess of the applied screening criteria for any of the validation tests. Therefore, there is no risk to human health from the topsoil used in the cover system. Topsoil chemical screening can be found in Appendix B.

Subsoil Validation

Laboratory testing for SOM was carried out on 6no. samples of subsoil stockpiled at a site called Coach Lane in Newcastle Upon Tyne. The testing was carried out in line with YALPAG's guidance of soils from a brownfield source.

SOM% was recorded between 1.3% and 8.7%. A 2.5% SOM has been assumed to assess the risk from the subsoil.

No determinants were found to be in excess of the applied screening criteria for any of the Validation tests. Therefore, there is no risk to human health from the subsoil used in the cover system. Subsoil chemical screening can be found in Appendix B.

4. GAS MEMBRANE

As part of the original Phase II ground investigation by REL in November 2016, a preliminary ground gas risk assessment was carried out. In this report, REL stated the following;

“The GSV of 0.014 l/hr for Carbon Dioxide falls within a Characteristic Situation 1 (CS1) classification category as such, based upon the above, ground gas protection measures would not be required for this site. However, despite the lack of significant ground gas concentrations or flow rate, due to the depleted oxygen levels recorded, it would be prudent to adopt a conservative approach and as such REL consider an increase to Characteristic Situation 2 would be appropriate. As such, basic ground gas protection measures would be required.”

The membrane specification chosen by the contractor is presented as Appendix 5.

The membrane installation has been witnessed by an independent specialist building control consultant, EDS Floors Limited. A copy of their inspection report and a specification of the gas barrier is contained within Appendix 5.

5. CONCLUSIONS AND RECOMMENDATIONS

Conclusions

- All sources of soils contamination within a suitable depth to mitigate any potential risk to human health as far as reasonably practicable have been removed from site.
- Chemical testing carried out according to YALPAG Brownfield Source Testing shows no risk to human health from topsoil placed in back and front garden plots.
- Chemical testing carried out according to YALPAG Brownfield Testing shows no risk to human health from subsoils placed in front and back garden plots.
- Depth verifications carried out to confirm that 0.6m of soils were placed in the back and front garden plots of 1, 2, 8, 9, 14 and 15.
- The gas membrane installation has been witnessed by an independent specialist EDS Floors Limited.
- The third party report relative to the gas membrane is included as Appendix 5.

Recommendations

- It is considered by Swan Environmental Limited that the site poses no risks to human health and is suitable for residential use with plant uptake.

SAMPLE INFORMATION

MCERTS (Soils):
Soil descriptions are only intended to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions. MCERTS accreditation applies for sand, clay and loam/topsoil, or combinations of these whether these are derived from naturally occurring soils or from made ground, as long as these materials constitute the major part of the sample. Other materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

All results are reported on a dry basis. Samples dried at no more than 30°C in a drying cabinet.
Analytical results are inclusive of stones.

DEVIATING SAMPLE INFORMATION

Comments
Sample deviation is determined in accordance with the UKAS note "Guidance on Deviating Samples" and based on reference standards and laboratory trials.
For samples identified as deviating, test result(s) may be compromised and may not be representative of the sample at the time of sampling.
Chemtech Environmental Ltd cannot be held responsible for the integrity of sample(s) received if Chemtech Environmental Ltd did not undertake the sampling. Such samples may be deviating.

Key

N	No (not deviating sample)
Y	Yes (deviating sample)
NSD	Sampling date not provided
NST	Sampling time not provided (waters only)
EHT	Sample exceeded holding time(s)
IC	Sample not received in appropriate containers
HP	Headspace present in sample container
NCF	Sample not chemically fixed (where appropriate)
OR	Other (specify)

ANALYTICAL TEST REPORT

Contract no: 79418

Contract name: Pennywell

Client reference: -

Clients name: Swan Environmental Services

Clients address: Cedars Business Centre
Barnsley Road, Hemsworth
Pontefract
WF9 4PU

Samples received: 02 December 2019

Analysis started: 02 December 2019

Analysis completed: 09 December 2019

Report issued: 09 December 2019

Notes:
Opinions and interpretations expressed herein are outside the UKAS accreditation scope.
Unless otherwise stated, Chemtech Environmental Ltd was not responsible for sampling.
Methods, procedures and performance data are available on request.
Results reported herein relate only to the material supplied to the laboratory.
This report shall not be reproduced except in full, without prior written approval.
Samples will be disposed of 6 weeks from initial receipt unless otherwise instructed.

Key:
U UKAS accredited test
M MCERTS & UKAS accredited test
$ Test carried out by an approved subcontractor
I/S Insufficient sample to carry out test
N/S Sample not suitable for testing
NAD No Asbestos Detected

Approved by: [redacted]

SAMPLE INFORMATION

MCERTS (Soils):

Soil descriptions are only intended to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions. MCERTS accreditation applies for sand, clay and loam/topsoil, or combinations of these whether these are derived from naturally occurring soils or from made ground, as long as these materials constitute the major part of the sample. Other materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

All results are reported on a dry basis. Samples dried at no more than 30°C in a drying cabinet.
Analytical results are inclusive of stones.

Lab ref	Sample id	Depth (m)	Sample description	Material removed	% Removed	% Moisture

DEVIATING SAMPLE INFORMATION

Comments
Sample deviation is determined in accordance with the UKAS note "Guidance on Deviating Samples" and based on reference standards and laboratory trials.
For samples identified as deviating, test result(s) may be compromised and may not be representative of the sample at the time of sampling.
Chemtech Environmental Ltd cannot be held responsible for the integrity of sample(s) received if Chemtech Environmental Ltd did not undertake the sampling. Such samples may be deviating.

Key

N	No (not deviating sample)
Y	Yes (deviating sample)
NSD	Sampling date not provided
NST	Sampling time not provided (waters only)
EHT	Sample exceeded holding time(s)
IC	Sample not received in appropriate containers
HP	Headspace present in sample container
NCF	Sample not chemically fixed (where appropriate)
OR	Other (specify)

Lab ref	Sample id	Depth (m)	Deviating	Tests (Reason for deviation)

ANALYTICAL TEST REPORT

Contract no: 84418

Contract name: East Boldon

Client reference: -

Clients name: Swan Environmental Services

Clients address: Cedars Business Centre
Barnsley Road, Hemsworth
Pontefract
WF9 4PU

Samples received: 14 February 2020

Analysis started: 14 February 2020

Analysis completed: 21 February 2020

Report issued: 21 February 2020

Notes:

Opinions and interpretations expressed herein are outside the UKAS accreditation scope.
Unless otherwise stated, Chemtech Environmental Ltd was not responsible for sampling.
All testing carried out at Unit 6 Parkhead, Stanley, DH9 7YB, except for subcontracted testing.
Methods, procedures and performance data are available on request.
Results reported herein relate only to the material supplied to the laboratory.
This report shall not be reproduced except in full, without prior written approval.
Samples will be disposed of 6 weeks from initial receipt unless otherwise instructed.
BTEX compounds are identified by retention time only and may include interference from co-eluting compounds.

Key:

U UKAS accredited test
M MCERTS & UKAS accredited test
$ Test carried out by an approved subcontractor
I/S Insufficient sample to carry out test
N/S Sample not suitable for testing

Approved by: [redacted]

SAMPLE INFORMATION

MCERTS (Soils):

Soil descriptions are only intended to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions. MCERTS accreditation applies for sand, clay and loam/topsoil, or combinations of these whether these are derived from naturally occurring soils or from made ground, as long as these materials constitute the major part of the sample. Other materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

All results are reported on a dry basis. Samples dried at no more than 30°C in a drying cabinet.
Analytical results are inclusive of stones.

DEVIATING SAMPLE INFORMATION

Comments
Sample deviation is determined in accordance with the UKAS note "Guidance on Deviating Samples" and based on reference standards and laboratory trials.
For samples identified as deviating, test result(s) may be compromised and may not be representative of the sample at the time of sampling.
Chemtech Environmental Ltd cannot be held responsible for the integrity of sample(s) received if Chemtech Environmental Ltd did not undertake the sampling. Such samples may be deviating.

Key

N	No (not deviating sample)
Y	Yes (deviating sample)
NSD	Sampling date not provided
NST	Sampling time not provided (waters only)
EHT	Sample exceeded holding time(s)
IC	Sample not received in appropriate containers
HP	Headspace present in sample container
NCF	Sample not chemically fixed (where appropriate)
OR	Other (specify)

ANALYTICAL TEST REPORT

Contract no: 84419

Contract name: East Boldon

Client reference: -

Clients name: Swan Environmental Services

Clients address: Cedars Business Centre
Barnsley Road, Hemsworth
Pontefract
WF9 4PU

Samples received: 14 February 2020

Analysis started: 14 February 2020

Analysis completed: 21 February 2020

Report issued: 21 February 2020

Notes:
Opinions and interpretations expressed herein are outside the UKAS accreditation scope.
Unless otherwise stated, Chemtech Environmental Ltd was not responsible for sampling.
All testing carried out at Unit 6 Parkhead, Stanley, DH9 7YB, except for subcontracted testing.
Methods, procedures and performance data are available on request.
Results reported herein relate only to the material supplied to the laboratory.
This report shall not be reproduced except in full, without prior written approval.
Samples will be disposed of 6 weeks from initial receipt unless otherwise instructed.

Key:
U UKAS accredited test
M MCERTS & UKAS accredited test
$ Test carried out by an approved subcontractor
I/S Insufficient sample to carry out test
N/S Sample not suitable for testing

Approved by: [redacted]

SAMPLE INFORMATION

MCERTS (Soils):
Soil descriptions are only intended to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions. MCERTS accreditation applies for sand, clay and loam/topsoil, or combinations of these whether these are derived from naturally occurring soils or from made ground, as long as these materials constitute the major part of the sample. Other materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

All results are reported on a dry basis. Samples dried at no more than 30°C in a drying cabinet.
Analytical results are inclusive of stones.

DEVIATING SAMPLE INFORMATION

Comments
Sample deviation is determined in accordance with the UKAS note "Guidance on Deviating Samples" and based on reference standards and laboratory trials.
For samples identified as deviating, test result(s) may be compromised and may not be representative of the sample at the time of sampling.
Chemtech Environmental Ltd cannot be held responsible for the integrity of sample(s) received if Chemtech Environmental Ltd did not undertake the sampling. Such samples may be deviating.

SAMPLE INFORMATION

MCERTS (Soils):

Soil descriptions are only intended to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions. MCERTS accreditation applies for sand, clay and loam/topsoil, or combinations of these whether these are derived from naturally occurring soils or from made ground, as long as these materials constitute the major part of the sample. Other materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

All results are reported on a dry basis. Samples dried at no more than 30°C in a drying cabinet.
Analytical results are inclusive of stones.

Appendix F Gas Protection Membrane

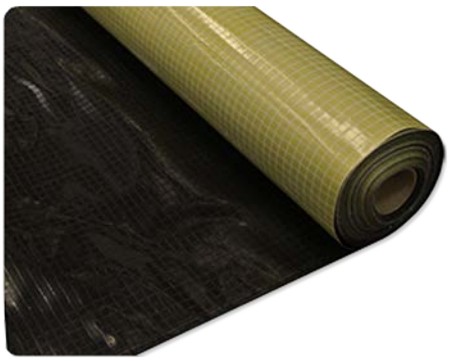
Rhinoplast Total Gas Barrier

Total Gas Barrier is a high quality, virgin polymer, reinforced, multi laminate membrane with an aluminium core.

Total Gas Barrier can be used as a hydrocarbon gas barrier in certain situations. The product is used as part of a full Radon/Carbon Dioxide/Methane (CS3/Amber 2) gas protection system and will meet all current legislation as listed below.

Total Gas Barrier prevents the transmission of harmful gases and due to the nature of it's construction, the membrane overcomes problems associated with membranes manufactured from post-consumer recycled waste.

Total Gas Barrier also acts as a damp proof membrane and can be welded.



Under new legislation, requirements may include:

- Independent verification supported with photographic documentation.
- Integrity testing in certain gas regimes. i.e upper levels of CS3/Amber 2.
- Quality assurance measures to be applied as per watchpoints in BRE 211/414
- The use of proprietary membranes (independently tested) with robust jointing.
- The use of pre-formed corner, threshold and pipe cloaks.

Product Specification

Roll Size: 2 x 50m

Test name	Test Method	Parameter	Value	Unit
Composition	ISO 2286-2	Coex Foil	138	gr/m²
		PE	15	gr/m²
		PP Fabric	13	gr/m²
		PE	25	gr/m²
		Aluminium 20µm	55	gr/m²
		Coex Foil	138	gr/m²
		PE	15	gr/m²
		PE	25	gr/m²
		Total Weight	424	gr/m²

Test Certificate

Test name	Test Method	Parameter	Value	Unit
Total Weight	NEN 1849-2	Total Weight	424	gr/m²
Tensile Strength	NEN 12311	Elongation CD	20,6	%
		Strength CD	488	N/50mm
		Elongation MD	19,4	%
		Strength MD	559	N/50mm
Nail Tear	NEN 12310	Tear Strength CD	504	N
		Tear Strength MD	432	N
Thickness	ISO 2286-3	Overall Thickness	0,56	mm
		Minimum Thickness	0.4	mm

Complies with BS8485:2015

Test	Value	Pass/Fail
Thickness	0.4mm	Pass
Single wound (No folds)		Pass
Methane Gas Transmission Test Method EN15105-1	< 40ml/24hr/m²	Pass

The performance of gas membranes is heavily dependent on the quality and design of the installation, resistance to damage after installation and the integrity of the joints (BS 8485)

Advantages

- Suitable for use as a proprietary gas barrier in Amber 2 and CS3 situation
- 2m wide single-wound membrane
- Extremely tough and resistant to tear and puncture
- Can be used as hydrocarbon vapour barrier in certain situations

Installation Details

Gas Protection systems should be installed in accordance with current guidance including BRE 211/414, CIRIA C665 & BS8485 and should provide a complete system to cover the whole footprint of the building.
The membrane should be laid on a smooth or sand blinded surface free from voids/hollows and objects which may damage the membrane. membrane should be jointed with Double sided Gas Tape with 150mm overlap and then sealed down with a Lap Tape. The membrane should be clean, dust-free and dry. Gas Membranes should provide continuity through walls by sealing and jointing to the DPC/cavity tray formed with GR DPC. Preformed details including internal/external corner units, top hat units, partition wall tray units and door reveal cloaks are available to complement the DPC providing added integrity to the system. Damaged or punctured areas should be patch repaired utilising the above method for jointing. Depending on subsequent covering, protection may be required to protect the system from puncture. Should integrity testing or a validation report be required, this should be factored in prior to the concrete/screed pour.

Ancillary Products

- Jointing system. Gas and Lap Tape
- GRM. Self adhesive gas barrier
- Geo-Vent + venting components
- Liquid Vapour Membrane
- Top Hat Pipe Cloaks
- GR DPC. Gas resistant DPC
- Radon Sump.
- Pre-formed Cloaks. Internal/external corners. Door threshold cloaks. Party wall tray.

See separate data sheet for more information.

Typical Details

To ensure that the specified system is capable of meeting the functional requirement of the application and current legislation and guidelines, offer project specific technical support through our team of experienced office and field based operatives.

- Design solutions offering the most cost effective system to comply with current legislation.
- Independent Integrity testing (site based)
- Bespoke systems to overcome difficult situations
- Independent Verification reports (site based)
- Next-day Delivery
- Supply and install service with on-site fabrication/welding

Plot 7 - 9

Site Survey, Gas Barrier Installation **Date: 07.05.19**

Client: EDS Ltd. **Surveyed by: Howard Shaw**

Installation Team: Eddie Taylor for EDS Ltd.

Site: Whitburn Road, East Bolden NE36 0AG. **Plot Ref: 7-9**

System: Rhinoplast Total Gas Barrier . Rhinoplast LT jointstrip 50mm wide, Proprietary Girth Tape. Internal corner details achieved by folding & taping. Cloaks are required at external corners & door apertures. Membrane installed over insulation on ventilated beam and block floor to cover the entire footprint of the plot. Characteristic situation Amber 2 / C3.

Final Checks conducted:

Joints sealed and taped:	Yes	**Girth tape installed:**	Yes
Service pipe penetrations, detailed and sealed	Yes	**Corners detailed and sealed:**	Yes
Footprint of structure intact:	Yes	**Membrane and ancillaries undamaged:**	Yes

General observations: There was an excellent standard of workmanship in line with the required NHBC specifications. All of the internal corners were taped. External cloaks & door pairs were installed where required, some corners were formed with "hospital corner" technique. The service pipes are sealed with Pipeseal products which are beyond our control, however they appear to perform satisfactorily. This plot is a terrace of 3 dwellings, with the membrane being continuous through the cavity party walls.

Recommendations: Final inspection to be carried out by Gentoo Homes site team prior to pour to repair any damage and ensure missing clips are fitted.

All service pipes routed through top hats must be sealed by way of a pourable butyl liquid sealant or similar at the next stage of fit. Failure to do so will compromise the installation. Please note that this is not part of the barrier system supplied by Principal Building Products Ltd and may not be the responsibility of the ground worker.

It is the main contractor's responsibility to ensure that following trades to not puncture the gas membrane.

Plot 1-3rev 1

Site Survey, Gas Barrier Installation **Date: 16.05.19**

Client: EDS Ltd. **Surveyed by: Howard Shaw**

Installation Team: Eddie Taylor for EDS Ltd.

Site: Whitburn Road, East Bolden NE36 0AG. **Plot Ref: 1-3 rev.1**

System: Rhinoplast Total Gas Barrier . Rhinoplast LT jointstrip 50mm wide, Proprietary Girth Tape. Internal corner details achieved by folding & taping. Cloaks are required at external corners & door apertures. Membrane installed over insulation on ventilated beam and block floor to cover the entire footprint of the plot. Characteristic situation Amber 2 / C3.

Final Checks conducted:

Joints sealed and taped: Yes **Girth tape installed:** Yes

Service pipe penetrations, detailed and sealed Yes **Corners detailed and sealed:** Yes

Footprint of structure intact: Yes **Membrane and ancillaries undamaged:** Yes

General observations: There was a good standard of workmanship in line with the required NHBC specifications. All of the internal corners were taped. External cloaks & door pairs were installed where required, some corners were formed with "hospital corner" technique. The service pipes are sealed with Pipeseal products which are beyond our control, however they appear to perform satisfactorily. This plot is a terrace of 3 dwellings, with the membrane being continuous through the cavity party walls. Details of revision, there had been an alteration to the party wall which affected the membrane. This had been repaired to my satisfaction. As the garages are attached it had been decided to apply the membrane to this part of the structure also, this work also met with my approval.

Recommendations: Final inspection to be carried out by Avant Homes site team prior to pour to repair any damage and ensure missing clips are fitted.

All service pipes routed through top hats must be sealed by way of a pourable butyl liquid sealant or similar at the next stage of fit. Failure to do so will compromise the installation. Please note that this is not part of the barrier system supplied by Principal Building Products Ltd and may not be the responsibility of the ground worker.
