Opener choice

Top Opener
A top hinged opener with the handle at the bottom that opens outwards.

Left Opener
A left opener (as seen from the outside always) with the hinge on the left side and the handle on the right side.

Right Opener
A right opener with hinge on the right and the handle on the left.

Dummy Opener
Looks just like a real opener, but it has no handle and does not actually open. It's just decorative to match real openers.

Building regulations apply to ventilation.
